

UTILITY BOX

Parade Plastics' utility box is designed for all segments of the food service industry. They are manufactured from rugged, high quality polyethylene. They are resistant to breaking, cracking, chipping, and warping. These boxes feature a smooth inner surface with a wide radius for easy cleaning. The plastic corners are molded thicker to reduce wear and tear and extend the life of this product. Parade utility boxes incorporate a textured outer surface, which resists scratching and marring for a long and attractive service life.

Parade Plastics' utility boxes also feature re-curved handles molded into the box. Designed for maximum comfort, efficiency, safety, and ease of use, especially in the work place. This ergonomic feature reduces stress on the fingers and hands when lifting heavy loads. The utility box features a small profile to conserve much needed storage space and has a maximum capacity of one gallon. The four stacking lugs located on the sides of the item prevent sticking when nested.

Parade utility boxes may be used for busing, storing, or transporting. They are available in three standard colors and have optional contoured lids. This allows these boxes to be stacked on top of one another without leaning or collapsing.

The utility box is made from FDA approved resins, NSF certified, and dishwasher safe.

UTILITY BOX LIDS

Unlike our competitors, Parade Plastics offers utility box lids for a unique way to conceal unsightly items and odors when busing. They are manufactured from rugged, high quality polyethylene and are resistant to breaking, cracking, chipping, or warping. The utility box lid is designed to be sturdy and rigid to resist the wear and tear from common usage and abuse. These utility lids are molded to sit comfortably on top of the utility box. A slight separation between the lid and the box allows for easy placement and removal.

Our utility box lids feature a smooth inner surface for easy cleaning. The textured outer surface, equivalent to the utility box, will resist scratching and marring, giving this item a long and attractive service life. The utility box lid is contoured to fit the bottom of the utility box. This allows them to be comfortably stacked on top of one another. Ridges on the top of the lid will help prevent sliding when double stacked.

The utility box lids are available in one size and three standard colors. All utility box lids are made from FDA approved resins, NSF certified, and dishwasher safe.
